| SOFTWARE: Patentin Ver. 2.0
| SOFTWARE: Patentin Ver. 2.0
| SEQ ID NO 10
| LENGTH: 5
| TYPE: PRT
| ORGANISM: Artificial Sequence
| FEATURE: OTHER INFORMATION: With Classical Cell Adhesion Recognition Sequence
| OTHER INFORMATION: With Classical Cell Adhesion Recognition Sequence
| OTHER INFORMATION: Cyclic Peptide may comprise N-terminal
| OTHER INFORMATION: modification such as acetyl or alkoxybenzyl group
| OTHER INFORMATION: and/or C-terminal modifications such as amide or US-09-769-145-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

FEATURE: OTHER INFORMATION: Description of Artificial Sequence: Cyclic Peptide OTHER INFORMATION: with Classical Cell Adhesion Recognition Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FEATURE:
OTHER INFORMATION: Cyclic Peptide may comprise N-terminal
OTHER INFORMATION: modification such as acetyl or alkoxybenzyl group
OTHER INFORMATION: and/oz C-terminal modifications such as amide or
OTHER INFORMATION: ester group

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 87, Application US/10105008
; Sequence 87, Application US/2030065136A1
; GENERAL INPORMATION:
; APPLICANT: Blaschuk, Orest W.
; APPLICANT: Gour, Barbara J.
; APPLICANT: Farockhi, Riaz
APPLICANT: Farockhi, Riaz
APPLICANT: Farockhi, Riaz
APPLICANT: Farockhi, Compounds AND METHODS FOR MODULATING CELL ADHESION
; TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING CELL ADHESION
; TILE OF INVENTION: COMPOUNDS
; CURRENT FILING DATE: 2002-03-22
; NUMBER OF SEQ ID NOS: 99
; SOFTWARE: Patentin Ver. 2.0
; SEQ ID NO 87
; TYPE: PRESTURE:
; ORGANISM: Artificial Sequence
; FEATURE:
; FEAT
TYPE: PRT

CRGANISM: Artificial Sequence
FRATURE:
CHER INFORMATION: Description of Artificial Sequence: Cyclic Peptide
OTHER INFORMATION: With Classical Cell Adhesion Recognition Sequence
OTHER INFORMATION: Cyclic Peptide may comprise N-terminal
OTHER INFORMATION: modification such as acetyl or alkoxybenzyl group
OTHER INFORMATION: and/or C-terminal modifications such as amide or
US-10-105-008-84
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              APPLICANT: Blaschuk, Orest W.

OTHER INFORMATION: Cyclic Peptide may comprise N-terminal
OTHER INFORMATION: modification such as acetyl or alkoxybenzyl group
OTHER INFORMATION: and/or C-terminal modifications such as amide or
OTHER INFORMATION: ester group
                                                                                                APPLICANT: Chen, Zhigang
APPLICANT: Michaud, Stephanie Denise

TITLE OF INVENTION: PEPTICOMIMETIC MODULATORS OF CELL ADHESION
FILE REFERENCE: 100086.401040
CURRENT APPLICATION NUMBER: US/10/425,557
CURRENT FILING DATE: 2003-04-28
NUMBER OF SEQ ID NOS: 96
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 81
                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 6;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 6;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description of Artificial Sequence: Cyclic Peptide with Classical Cell Adhesion Recognition Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FEATURE:
OTHER INFORMATION: Cyclic Peptide may comprise N-terminal
OTHER INFORMATION: modification such as acetyl or alkoxybenzyl group
OTHER INFORMATION: and/or C-terminal modifications such as amide or
OTHER INFORMATION: ester group
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          APPLICANT: Glaur, Barbara J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 101, Application US/10632678

Sequence 101, Application US/106345A1

Bublication No. US20040106545A1

GENERAL INFORMATION:

APPLICANT: Blaschuk, Orest W.

APPLICANT: GOUX, Barbara J.

APPLICANT: Farcokhi, Riaz

APPLICANT: Ali, Anmar

TITLE OF INVENTION: COMPOUDS AND METHODS FOR MODULATING CELL ADHESION

FILE REFERENCE: 100086.401C18

CURRENT APPLICATION NUMBER: US/10/632,678

CURRENT FILING DATE: 2003-08-01

NUMBER OF SEQ ID NOS: 101

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 101
